

# Interphase of COVID-19 in pet animals.....

## Key points to remember...

- ✓ At this time, there is no evidence that pet animals play a significant role in spreading the virus that causes COVID-19.
- ✓ Based on the limited information available to date, the risk of pet animals spreading COVID-19 to people is considered to be low.
- ✓ We are still learning about this virus, but it appears that it can spread from people to animals in some situations.

## Corona virus infection in pet animals...

Pet have other types of coronaviruses that can make them sick, like canine and feline coronaviruses. These other coronaviruses cannot infect people and are not related to the current COVID-19 outbreak.

## Do I need to get my pet tested for COVID-19?

No. At this time, routine testing of animals for COVID-19 is not recommended.
